# SUMMARY

## ● PURPOSE

Create, edit, and organize notes quickly.

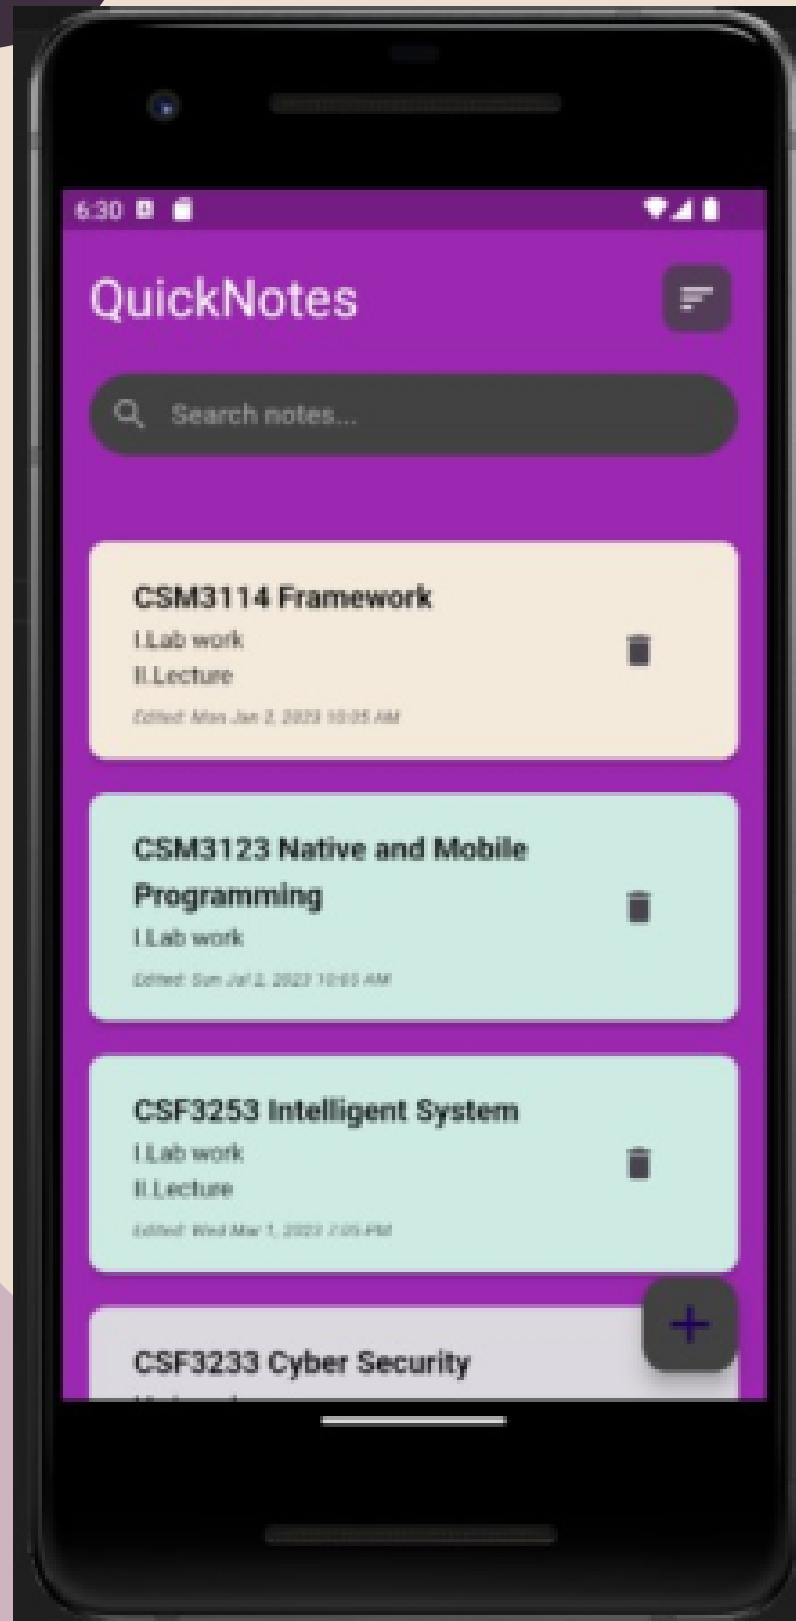

## ● FUNCTIONALITY

Note creation and editing.  
Organization based on the last update time.

## ● DESIGN FOCUS

Aesthetically pleasing and user-friendly.

# USER INTERFACE

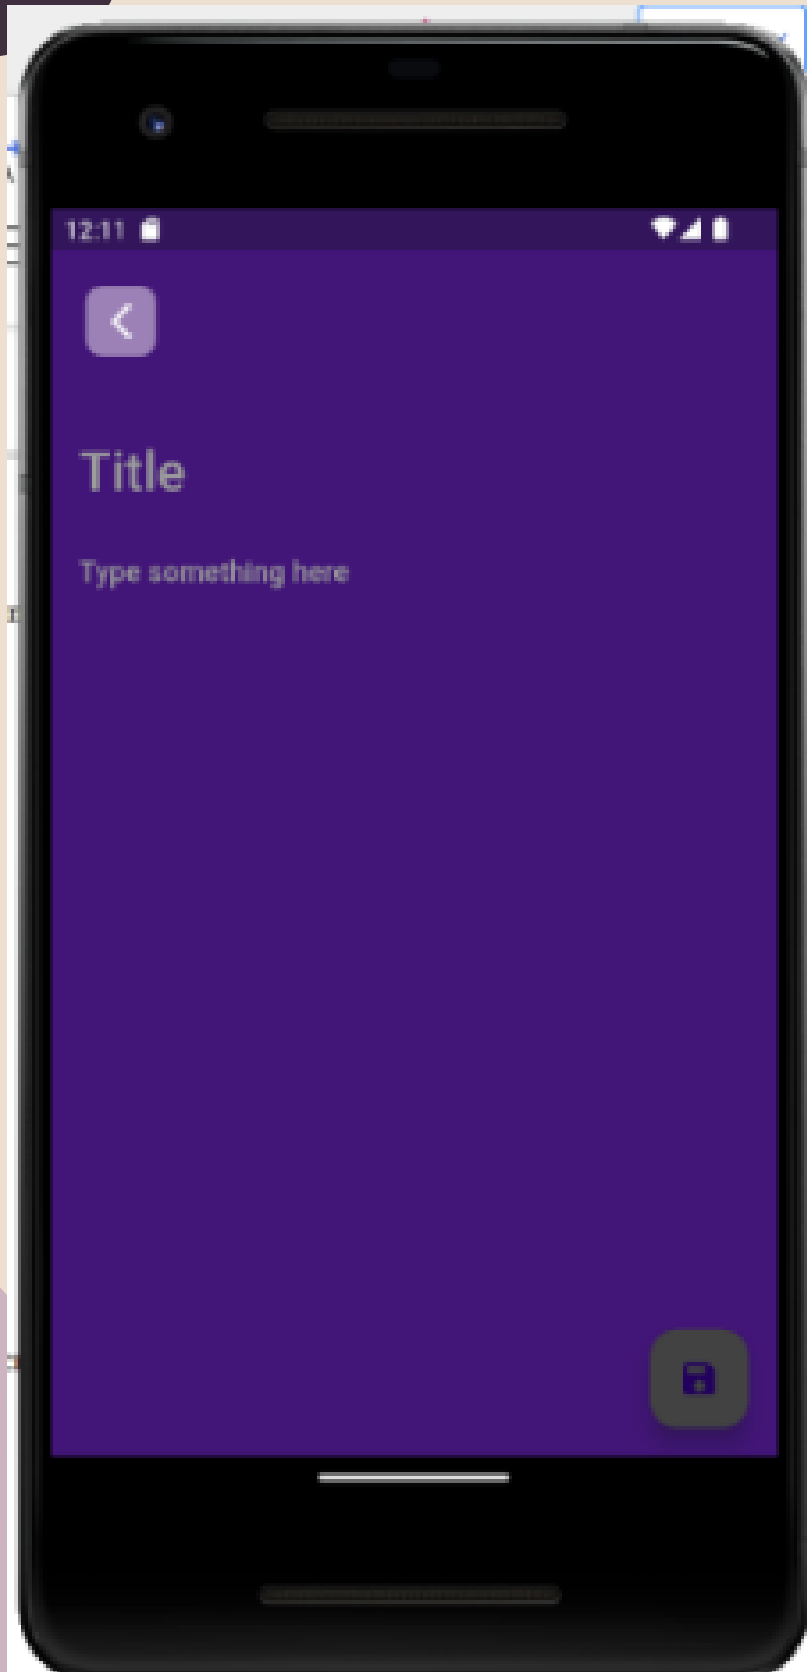

## Home Screen

The home screen for QuickNotes mobile app is a simple and user friendly design that show detail overview list of the notes. The list is based on what the user has add previously on 'Add Screen'. If the user has not yet add anything, the list will not be displayed. User can also type a search query to search specific notes from the list. Next, user can also using 'filterednotes' to allow users to quickly find the information they need within their notes. Then, it has delete button that function when the user tap on it, it will give between yes or no and remove the notes from the list.

# USER INTERFACE

## ADD NOTE SCREEN

**‘Add Notes Screen ‘ for QuickNotes mobile app.It is user friendly design that allow user to add the title and desription of the notes.It also have save button to make sure user can save the notes and it will pop up on the home screen.**

## LESSON LEARNED

**the lesson emphasizes how an application's usability and general attractiveness may be improved by keeping it simple and focused on the user experience.**

## CONCLUSION

- **requires a combination of simplicity and an understanding of user demands.**
- **QuickNotes app is proof of the effectiveness of user-centered design and simplicity in the field of mobile applications.**

## COMMERCIAL VALUE

- **The QuickNotes app prototype's price is established by taking into consideration a number of variables, including functionality, target market, and perceived value.**
- **The app's ability to earn money for its features and satisfy user preferences is what determines its commercial worth.**

**THANK YOU**
